

## The ORIGINAL BLOCKOUT®

Our standard roller shutter

The Original Blockout Roller Shutter is our standard external shutter. Designed with quality insulation properties, it is ideal for homeowners who require a reduction in heat or cold, noise and light.

The shutters' interlocking slats and optional dual locking system provide added security and will lock the shutter if required, while still admitting filtered light and ventilation. This is a feature not available on other shutter brands.

The profile is manufactured from **41mm roll formed** aluminium. It has a polyurethane foam core and a standard 53mm track.

### TECHNICAL INFORMATION

Maximum width - 3 metres

Track sizes - 53mm

Colour range - 13 standard colours\*

Profile - Perforated and non-perforated.

## ROLL FORMED MAXIBLOCK®

More strength than the standard

Roll Formed Maxiblock® Roller Shutter is a stronger version of the Original Blockout Roller Shutter and is our most popular shutter.

Maxiblock® Shutters are primarily installed on homes where security is a major deciding factor. The 70mm deep tracks compared to 53mm give better support. The walls are thicker and stronger (5mm and 3mm compared to 1.2mm). The unique feature of the Maxiblock® track is the built-in internal locking chamber which secures the shutter slats inside the tracks, making it 3 times stronger than the standard shutter (380 kgs pulling force compared to 120 kgs).

Manufactured from **41mm roll formed** aluminium with a polyurethane foam core and a heavy duty Maxiblock® 70mm track with built-in internal locking chamber.

### TECHNICAL INFORMATION

Maximum width - 3.5 metres

Track sizes - 70mm

Colour range - 13 standard colours\*

Profile - Perforated and non-perforated.
