

Architect Robert Orr chose Blockout shutters to provide a combination of security, insulation and shading for the office windows of the new BBC stores at Rockdale, Bankstown, Five Dock, Thornleigh and Mascot. Roll formed aluminium Blockout Maxiblock® shutters were selected as they would provide the greatest strength (up to 3 times) opposed to other standard shutters. The shutters featured tighter rolling action, saving space and adjustable light

control for internal comfort. The shutter profiles were also filled with a fire retardant foam core adding further protection from fire and vandalism. The shutters are easily operated by 240 volt controllers. To complement the building's colour scheme, the shutter pelmets and tracks were powder coated to match the colour of the windows.

COMMERCIAL BLOCKOUT PS02

Blockout Shutters have been used by CityRail on all of the station upgrades since 1991. The main purpose of the shutters is to protect the ticket windows from vandalism.

The Project Manager in charge of the station upgrading, Garo Bardzhamian, selected extruded Blockout Maxiblock® shutters because of their extra strength as opposed to standard domestic shutters (rated at 1000kgs + per metre).

These Blockout shutters also feature a very tight rolling action retracting into a smaller pelmet, therefore saving space and aesthetically providing a better outcome. The Maxiblock® Shutters (pictured left) have been in-built during construction. The shutter pelmet and frames were installed in the wall cavity, adding more strength and protection. Shutters are operated simply by either manual or electronic controls.
